

technical profiter

Mister Andrew G. Waterman
Technical Lead

- Here at C22, Andrew is responsible for development and management of our technical resources which deliver technical services. He forecasts technology needs and institutes plans to meet them. He ensures the highest technology standards including design, usability and performance issues. His responsibilities include supporting pre-sales activities such as identifying and closing additional project opportunities, maintaining and identifying budget issues for the tech department in addition to assembling and overseeing project teams. He also works closely with Engagement to identify and implement opportunities that increase product/ process efficiency, focusing primarily on technical.
- Andrew also develops alternative approaches to solving client technical needs and requirements using his expert skills in using and applying our systems process. His primary contributions consist of Object Architecture, ReFactoring, and applying new technologies to existing problems.
- Prior to C22, Andrew served in technical director and consultant capacities at a variety of high-end technology firms, including Oracle, where he contributed to and co-authored initial specifications and release versions of Oracle Mobile Server, Web-to-Go, an application that seamlessly synchronizes data and applications with mobile clients (Notebooks, PDAs, etc.). In addition to his normal workload, he has also found the time to teach a course at the Multimedia Studies Program at San Francisco State University entitled, "Databases and the Web"; an intensive, 16-hour course covering the entire stack of database-driven web applications
- He earned his Master of Fine Arts degree in English Literature with a focus on English Romanticism and Literary Theory from San Francisco State University.
- In his free time he enjoys backgammon, biking, poetry, geeking out on Java(J2EE), C, COM, JNI, SQL and surfing (waves not web).
